

Achieving Consistent Quality in Coated Packaging Board manufactured with Recovered Paper:

‘Innovation in Paper Coating Latex’

Avnish Kumar Verma
Paper Coatings
BASF India Limited

IPPTA
Indian Pulp & Paper Technical Association

ZONAL SEMINAR-II 2023
30th-31st October, 2023
at KINGS VILLA 7
Muzaffarnagar (U.P.)

The poster features a circular diagram illustrating the paper recycling process. At the top, there are rolls of paper and cardboard. Arrows point to a collection of various paper products like bags, boxes, and books. An arrow leads to a blue recycling bin labeled 'PAPER'. Another arrow points to a large pile of recycled paper. A central circular inset shows a green tree growing out of a roll of paper, symbolizing the use of recycled paper. An arrow points to a truck carrying a roll of paper. The bottom of the poster has a blue banner with white text.

Efficient collection & processing of recovered paper for achieving improved yield and quality

Contents

- Insight of Coated packaging board manufactured with recycled board
 - Structure
 - Key market needs
- Challenges
- Remedies

Insight of Coated packaging board manufactured with recycled board

Packaging influences consumer a lot

- Brand Image
- Packet/Box design and ease of handling
- **Print appeal and overall appearance**

Insight of Coated packaging board manufactured with recycled board

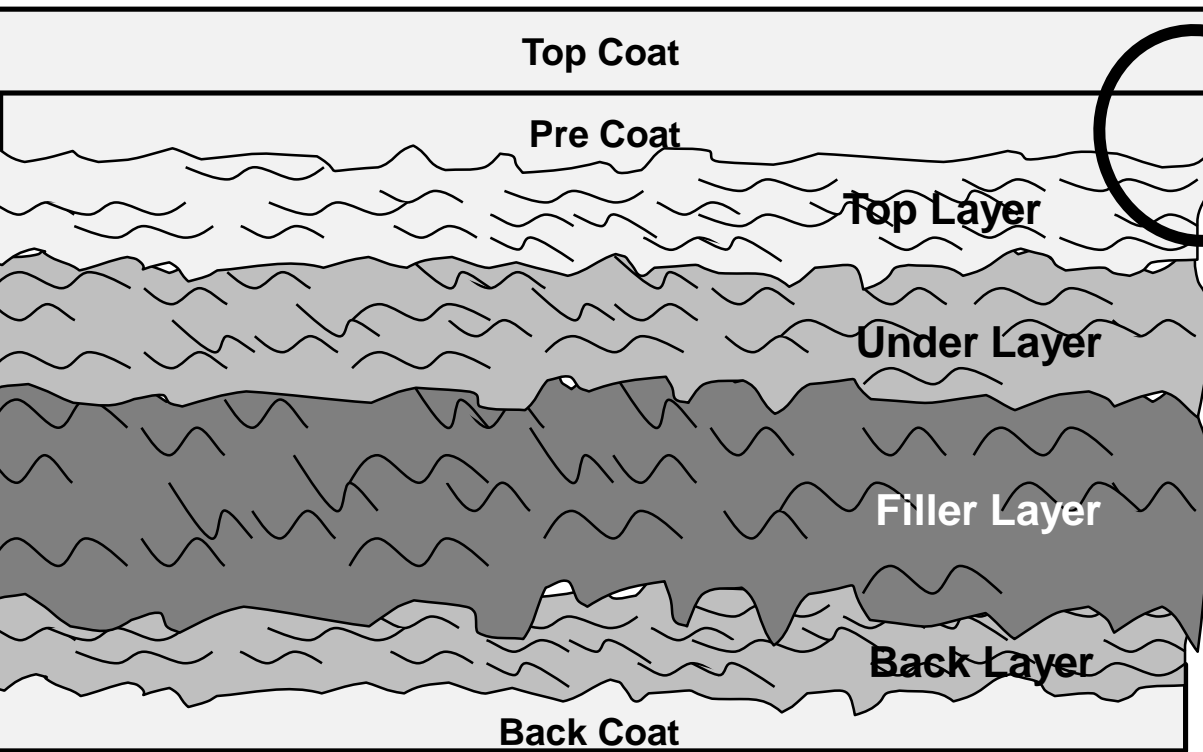

Challenges

- Degrading Furnish
- Inconsistent quality of board
- Faster Convertibility
- Superior Printability
- Sustainability
- Runnability
- Cost In Use

Magnification

Pores / Capillaries of baseboard

Insight of Coated packaging board manufactured with recycled board

Baseboard Surface → 2000 X Magnification (Pores/Capillaries)

Inconsistency in recovered fiber due to:

- Type of recovered paper
- Morphology of initial fiber
- Varying ash content
- Sourcing country

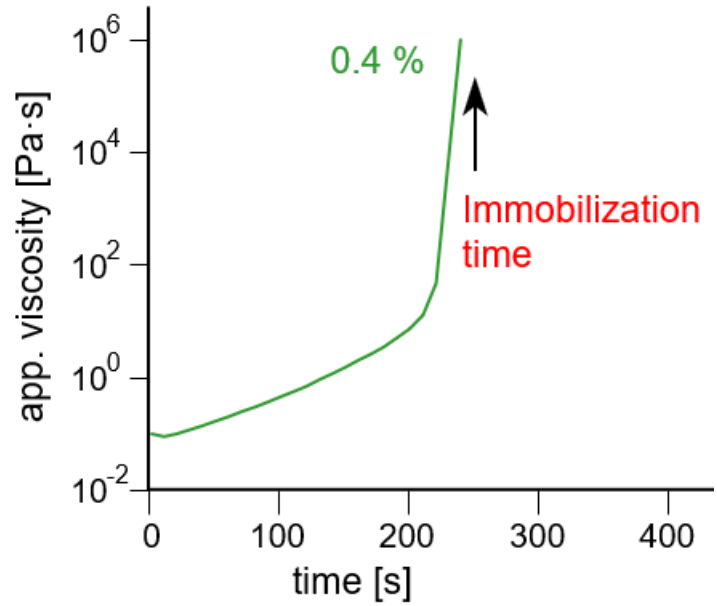

The inherent unavoidable variation leads to

- Changes the pore size and capillary in top layer of base board
- Non-uniform water migration from precoat color
- Binder Migration (with other water-soluble ingredients)
- Inconsistent coating coverage and strength
- Complaints on dusting and mottling

Improved water holding capacity of coating color can mitigate the above challenges

Test Methods of Water Holding Capacity of Coating Color

Anton Paar

Higher Immobilization time is preferred

Test Methods of Water Holding Capacity of Coating Color

Gradek Water Retention

$$WR = (W2 - W1) * 1250 \text{ gsm}$$

Lower water retention values are preferred

BASF's Approach - Revolutionary Binder

What we want to accomplish ...

Revolutionary High Performance Binder

Attaining step-change in
maintaining consistent coated
P&B properties

And How

Polymer Characteristic

- Unique balance between Monomers
- High internal cohesion
- Perfect water ink balance
- Special Additives

Colloidal Characteristic

- Particle size / distribution
- Emulsifier system (stability)

PROCESS

- Optimized monomer feeding strategy

Results - Precoat

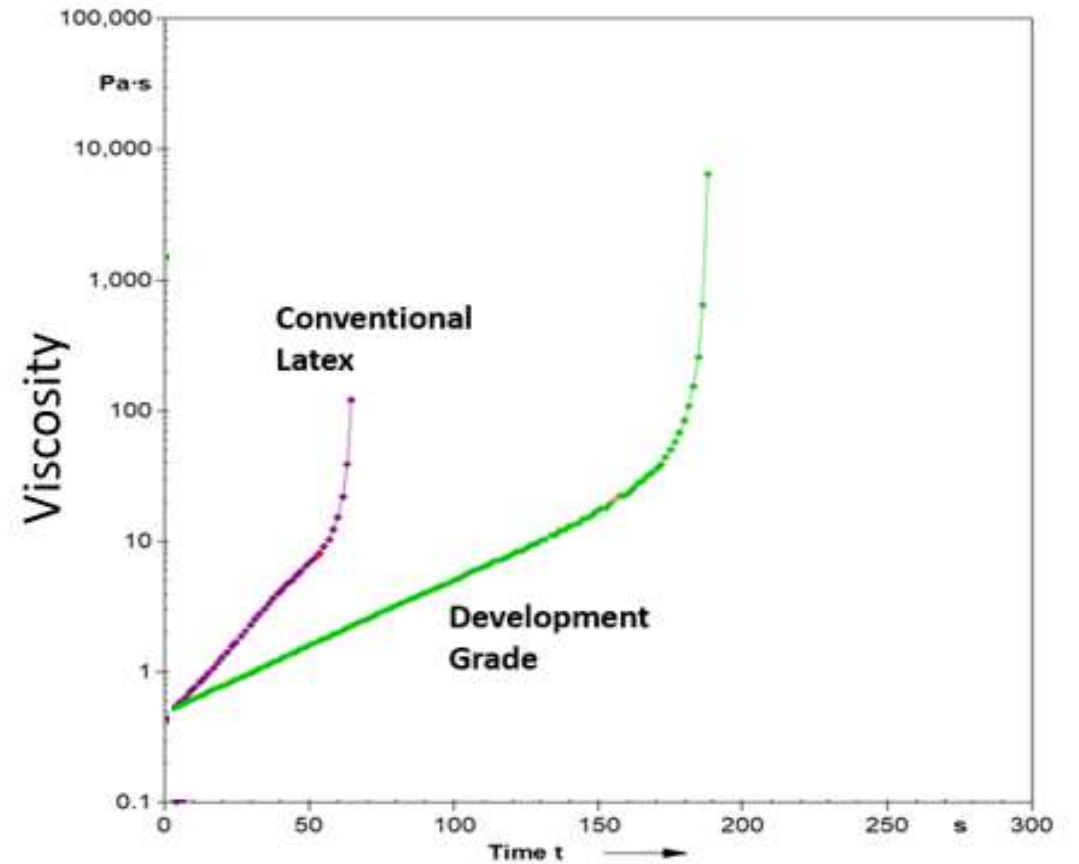

Recipe Details

| Ingredients (parts) | Conventional Latex | Development Grade |
|---------------------|--------------------|-------------------|
| C 60 | 100 pts | 100 pts |
| Dispersant | 0.04 pts | 0.04 pts |
| Rheology Modifier | 0.4 pts | 0.4 pts |
| Latex | 11 pts | 11 pts |

Coating Color Properties

| Testings | Conventional Latex | Development Grade |
|-----------|--------------------|-------------------|
| pH | ~ 9 | ~ 9 |
| Viscosity | 800 cps | 800 cps |
| Solids | 66% | 66% |
| Gradek WR | 65 gsm | 50 gsm |

Anton Paar data – On coating immobilization time

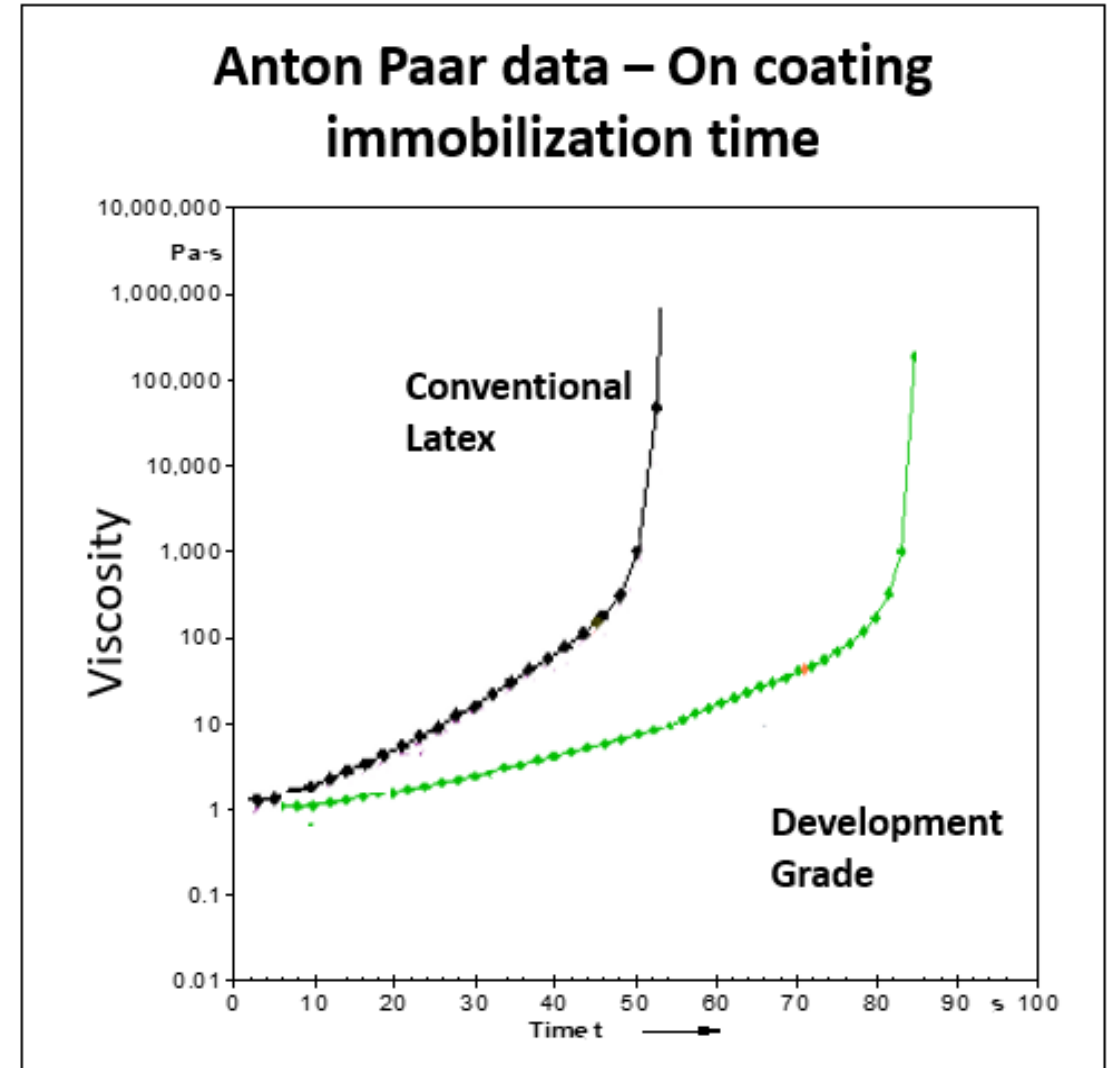

Results – Top coat

Recipe Details

| Ingredients (parts) | Conventional Latex | Development Grade |
|---------------------|--------------------|-------------------|
| C 95 | 70 pts | 70 pts |
| Clay | 30 pts | 30 pts |
| Dispersant | 0.08 pts | 0.08 pts |
| CMC | 0.45 pts | 0.45 pts |
| Latex | 12.5 pts | 12.5 pts |
| Crosslinker | 0.5 pts | 0.5 pts |

Coating Color Properties

| Testings | Conventional Latex | Development Grade |
|-----------|--------------------|-------------------|
| pH | ~ 9 | ~ 9 |
| Viscosity | 1000 cps | 1000 cps |
| Solids | 64% | 64% |
| Gradek WR | 90 gsm | 68 gsm |

Conclusion on Technical Experiments:

- Extensive testings, consistently showed superior performance of the new latex grade on Gradek and Anton Paar equipment.
- The positive results prompted the use of scaled-up paper latexes in real paper mill trials, meeting the expectations of end users.
- Customer complaints about mottling and dusting significantly decreased with the new latex. These latexes are in commercial use now at various paper mills

Conclusion

- A key challenge in using recovered paper for paper manufacturing is ensuring consistent quality in final product.
- The challenges of ensuring consistency in quality is even more critical for coated duplex board, due rigorous printing and converting processes.
- In order to keep up with the increasing emphasis on recycling, paper manufacturers must embrace and implement new technologies in their production processes.
- BASF remains dedicated to investing in continuous innovation, aiming to address the challenging key issues faced by customers and provide them with cutting-edge technology that can offer a significant competitive advantage in the coated paper and board industry.
